EDUCATION

Indiana University Bloomington, Bloomington, Indiana, USA

Aug 2023 – May 2027

Bachelor of Science in Data Science — GPA: 3.4/4.0

TECHNICAL SKILLS

Programming Languages: Python, SQL, PostgreSQL, R

Data Visualization: Tableau, Power BI, Excel (Pivot Tables)

Automation & Tools: Power Query, DAX, Power Automate

Machine Learning: NLP, Collaborative Filtering, LSTM, Logistic Regression, KNN

Data Analysis: Data Cleaning, Feature Engineering, Model Evaluation, Exploratory Data Analysis

Tools & Libraries: TensorFlow/Keras, pandas, NumPy, scikit-learn

Concepts: Data Governance, Data Mapping, Master Data Management, Market Research Analysis, Statistical Analysis, Survey Design

WORK EXPERIENCE

Grant Thornton Bharat LLP, Gurugram, India

Digital Consulting Intern

June 13, 2026 – August 13, 2026

- Partnered with clients across 3 transformation initiatives, identifying 10+ automation opportunities saving ~200 hours/year.
- Conducted data analysis on 5,000+ client operational records using Python and Excel, shaping 6 adopted consulting recommendations.
- Designed 4 executive dashboards visualizing KPIs for client leadership, cutting manual reporting time by ~30%.
- Benchmarked 8 emerging digital tools against client capabilities with a 5-person cross-functional team, informing the client's tool-adoption roadmap.
- Documented process maps across 3 client workstreams, cutting new-hire onboarding time by ~20%.
- Presented findings to client leadership across 5+ stakeholder review sessions, directly informing transformation strategy.

PROJECTS

Stock Price Prediction with LSTM

February 2026

- Engineered an LSTM forecasting model in TensorFlow/Keras on 5+ years of historical stock data, achieving ~92% directional accuracy through MinMax-scaled preprocessing and sequence-length tuning.
- Ran 50+ hyperparameter tuning experiments across lookback window, LSTM units, and learning rate, reducing validation loss by ~35% and cutting mean absolute error to under \$2 per share.
- Visualized predicted vs. actual prices across 3 market regimes (bull, bear, sideways) using Matplotlib, validating model robustness under volatility.

Movie Recommendation System

November 2025

- Implemented user-based and item-based collaborative filtering on 100,000 MovieLens ratings using cosine similarity and KNN, reducing RMSE to ~0.89 across ~1,000 users.
- Tested 5 similarity metrics and neighborhood sizes ($k = 5$ to 50) to identify the best-performing configuration, mitigating sparsity and cold-start effects.
- Evaluated ranking quality using precision@10 alongside RMSE, achieving ~78% precision@10 on held-out test users.

Automated AI Voice Calling Agent

August 2025

- Deployed a multilingual (Hindi, Punjabi, English) AI voice agent placing ~20 client calls/day for trademark renewals, verifying details and routing payments or escalations to a human agent.
- Automated daily client selection, logging, and follow-ups end-to-end and integrated outcomes with the firm's renewal database, cutting manual outreach time by ~40% and missed deadlines by ~25%.
- Logged call transcripts and outcomes automatically for compliance tracking, eliminating ~5 hours/week of manual data entry.

Master Data Quality & Reporting Pipeline (PostgreSQL, Power BI)

May 2025

- Consolidated 6 source files into a normalized PostgreSQL database, writing SQL queries that flagged 150+ duplicate and missing-value records across master and product data.
- Created an interactive Power BI dashboard using Power Query and DAX to track 10 data-quality KPIs, presenting findings to 3 stakeholder groups and driving adoption of standardized validation checks.
- Scheduled recurring data-quality checks via SQL scripts, cutting manual audit time by ~50% each reporting cycle.

Fantasy Premier League (FPL) Team Optimizer

Ongoing, 2026

- Building expected-points predictions for 600+ FPL players using performance, fixtures, and form data.
- Formulating squad selection as a constrained (budget, formation) optimization to recommend weekly transfers.
- Backtesting the model against 3 prior FPL seasons of historical data to validate prediction accuracy ahead of live deployment.
